Procedure: _____

It has been explained to me that conditions may arise during this procedure whereby a different procedure or an additional procedure may need to be performed, and I authorize my veterinarian to do what she feels is needed and necessary. I have been advised as to the nature of the procedure and the risks involved. I understand that complications including, but not limited to infection, cardiac arrest, and death could result. I acknowledge that no guarantee has been made as to the result or cure. I assume full financial responsibility for all charges and it is understood that all fees must be paid before the pet is released.

I also understand that if my pet is presented to Valencia Animal Clinic infested with fleas or ticks, my pet will be treated at an additional cost to me in the amount of **\$15.00**.

Like you, our greatest concern is the well-being of your pet. Before placing your pet under anesthesia, a veterinarian will perform a complete physical exam to identify any existing medical conditions that could complicate the procedure and compromise the health of your pet. However, many conditions, including disorders of the liver, kidneys and blood, may not be detected unless blood testing is performed. These tests are similar to those your own physician would run if you were to undergo anesthesia. These tests will check blood glucose, kidney and liver enzymes. It is important to understand that a pre-anesthetic profile does not guarantee the absence of anesthetic complications, but it may greatly reduce the risk of complications as well as provide a baseline of normal values. The additional cost for the pre-anesthetic blood testing is **\$49.45**. **Bloodwork is required to have been preformed within 1 month for ALL dentals.**

I DO _____ DO NOT _____ wish to have the pre-surgical blood work run today.

My pet has already had recent bloodwork done on _____.

I DO _____ DO NOT _____ wish to have an Felv/FIV test today. Felv/FIV test cost **\$36.97**

We also offer a pre-anesthetic EKG prior to their procedure. An EKG performed in office with the above blood tests offers the additional analysis of heart function. EKG cost **\$43.50**.

I DO _____ DO NOT _____ wish to have the pre-surgical EKG performed today.

IV CATHETER AND FLUIDS:

Your pet is older and therefore his/her heart and internal organs are also older. We strongly recommend that we put in an intravenous catheter, and administer fluids during surgery. The placement of an IV catheter allows access to a patient's vein at all times. In the event of an emergency during surgery, medication can be given intravenously immediately. It has been our experience that patients who have received IV fluids during a procedure wake up much more comfortably. The additional cost for this is **\$45.00**.

I DO _____ DO NOT _____ wish to have the IV catheter and fluids.

Please call me back at the following number to let me know how surgery went. _____.

Signature _____ Date _____
